Live reclaim your body with Vaginal Laser Rejuvenation

BRING YOUR *Life* BACK TO LIFE

Take control of your vaginal health

FemTouch™
Vaginal Laser Rejuvenation

Why FemTouch™?

- **FAST**
Safe and comfortable in-office procedure taking a few minutes each
- **EFFICIENT**
Optimal outcomes after 2-4 sessions
- **SIMPLE**
Minimal post-procedure care with no anesthesia required

What should I expect?

When will I see results?

Typically, 2-4 treatments are needed to see optimal results and achieve the desired outcome on the vaginal layer. In clinical evaluations, women reported feeling improvement after 1-2 treatment sessions.

What can I expect after treatment?

Immediately after treatment you may feel a very mild heat sensation, in which case your treatment provider can prescribe a hydrating gel. This sensation should not last longer than a few hours.

FemTouch™

Vaginal Laser Rejuvenation

What is it?

About vaginal health

With age and after childbirth, women start noticing symptoms related to their vaginal health that affect their lifestyle on different levels. Vaginal atrophy or dryness is a common symptom in postmenopausal women. Stress urinary incontinence is another symptom, as well as vaginal laxity after childbirth, which can impact satisfaction with sexual intercourse.

Nearly **50%**
of postmenopausal women
suffer from **stress urinary
incontinence**¹

And nearly **80%**
suffer from **vaginal atrophy**²

Lumenis energy-based treatments must be performed by a physician or an authorized provider in your region. Energy-based treatments are not suitable for everyone and carry some risks. Be sure to consult with your treatment provider before choosing this procedure.

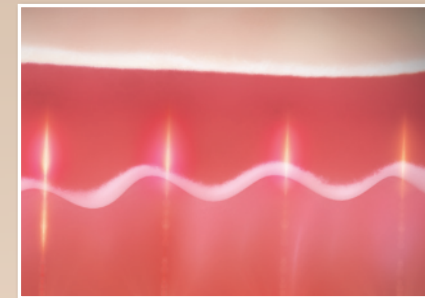

How does it work?

FemTouch™ technology

FemTouch addresses vaginal health related conditions by promoting the remodeling of the vaginal mucous layer. The fractional CO₂ laser beams are applied along the vaginal wall, resulting in regeneration of the tissue.

The treatment

Before treatment, your physician should assess your vaginal health to ensure you are a good candidate for the treatment. During the procedure, your physician will move the sterilized applicator along the vaginal wall in an outward motion, applying the laser in a 360° pattern covering the entire area. The procedure should take a few minutes. You may experience a minor heat sensation during the treatment, but it is very gentle and you should not feel uncomfortable.
